

CONSTRUCTION MANAGEMENT, B.S.

The Construction Management bachelor's degree builds on a foundation strong in basic construction technology, mathematics, science and general education. This ACCE-accredited program includes courses covering project costs, estimating, scheduling, contracts, total quality management, safety, engineering fundamentals, technical communication and business management. Construction-related computer software is integrated into all areas of the curriculum. By blending technical instruction in construction and engineering with a strong business education, students will be prepared to manage and supervise the entire construction process. Graduates should anticipate obtaining positions in general contracting, project coordination, field supervision, quality assurance/control, estimating, field inspection, scheduling and subcontracting.

3+1 PROGRAM
